

Statement on ISO 9001 and IATF 16949 Certification

Suzuki Garphyttan maintains certification to **IATF 16949**, the internationally recognized Quality Management System standard for the automotive industry.

IATF 16949 is established on the requirements of **ISO 9001** and includes all applicable ISO 9001 requirements as its foundation, supplemented by additional automotive industry-specific requirements. Consequently, organizations certified to IATF 16949 are required to establish, implement, maintain, and continually improve a Quality Management System that conforms to both ISO 9001 and the additional requirements defined by IATF 16949.

As a result, Suzuki Garphyttan does not maintain a separate ISO 9001 certificate. Although the organization does not hold a standalone ISO 9001 certification, our IATF 16949 certification is issued and maintained through independent third-party audits conducted by an accredited certification body. These audits assess conformity with the requirements of IATF 16949, including the ISO 9001 requirements incorporated within the standard. Consequently, our customers and stakeholders can be assured that ISO 9001 requirements are incorporated within, audited through, and maintained under our IATF 16949 certified Quality Management System. The organization therefore relies on its IATF 16949 certification as objective evidence that the ISO 9001 requirements are effectively addressed within the certified management system.

Suzuki Garphyttan remains committed to maintaining an effective Quality Management System, meeting customer requirements, and pursuing continual improvement across all relevant business processes.
