

ADDING NEW PERFORMANCE

Suzuki Garphyttan has been a leading supplier of valve spring wire on an industrial scale since car production began. Now we are adding new performance by introducing OTEVA SC PLUS.

Our strategy to meet the customer's requirements is always to deliver better quality and customer value. This is why we now highlight our oil tempered wire for valve applications further by introducing OTEVA SC PLUS. Only a few steel works can satisfy the requirements we place on the raw material. Among these, the most specialized steel mills will be qualified for OTEVA SC PLUS.

Our organisation has been fine-tuned over a hundred years to ensure the highest possible quality and customer value for our valve spring wire. By our reviews and evaluations of the steel mills to the utmost, through our R&D activities, we can select the best steel mills for the

most demanding valve spring applications. Together with our specialized wire manufacturing process, we are now launching OTEVA SC PLUS. If you start with a high quality valve spring wire, you can work with a lighter, thinner and narrower design.

Our competitive advantage is that we can offer valve spring wire with top quality and service. Since 1926, valve spring wire from Suzuki Garphyttan has been the obvious choice and you will find it in the most demanding premium brands on the car market.
